

## Ninja Link Cloaker “How To” Guide

### Create a Ninja Link

Used to fly under the radar as an affiliate when sending people to pages on the internet.

**Step1.** You enter your affiliate ID. Example case: <http://xxxx.ninjalink.hop.clickbank.net>  
(replacing the xxxx with your clickbank ID)

**Step2.** Enter the ACTUAL domain of the product your promoting (OR any page you'd like the visitor to land on). So in this case it'd be <http://www.ninjalinkcloaker.com>  
This is the URL the visitor will see, and is the URL they'll actually land on.  
The affiliate URL in step1 is loaded first, but only for long enough to land the affiliate cookie, then it directs to whatever you put in for step 2.

**Step3.** Name the page & create it. Eg. In this case I'd name it [ninja.htm](#)

Then upload to your website, and simply link to it!

### Create a Cloaked Page

Used to make mask webpages within your own pages, so it appears the page is coming from your web address.

**Step1.** You enter your affiliate ID. Example case: <http://xxxx.ninjalink.hop.clickbank.net>  
(replacing the xxxx with your clickbank ID)

**Step2.** Enter the page title you'd like to use. Eg. Ninja Link Cloaker

**Step3.** Name the page & create it. Eg. In this case I'd name it [ninja.htm](#)

Then upload to your website, and simply link to it!
